

BRAILLEX Live+

As natural as my Smartphone

PAPENMEIER

BRAILLEX Live+ Efficiently and touchably elegant design.

Connected to a smartphone or notebook,
it will soon be a „must-have“ for all.

Wireless liberty

Suitable for users who are often on the move,
having their hands full of different things and
used to working with great flexibility.
By means of the integrated Bluetooth module,
you are able to establish an easy connection
to your Smartphone or notebook.
The integrated battery which can be charged
inside the device provides you with electricity
throughout the whole working day.

Use your smartphone and JAWS simultaneously.

With only a single keystroke on your
BRAILLEX Live+, you switch between the
operation of your Smartphone and the one
of your notebook.
BRAILLEX Live+ is connected to your smart-
phone via Bluetooth and to your notebook via
USB at the same time. In this way, it is possible
for you to control both devices at any time.

Write as fast and safe on your smartphone as usual.

Write as well on your notebook as on your
smartphone in a safe and fast way thanks
to the high-quality PC keyboard of your
BRAILLEX Live+.

Ergonomic Braille reading

Reduce your wrist strains while reading, for
the device is no higher than 18 mm. Therefore,
a relaxed reading position is guaranteed.

Comfortable one-hand-operation

The patented Easy Access Bar ensures an
intuitive, fast and safe operation. It is a long
single lever (like a space bar) situated on the
front side of the device, all along the Braille
display, which can be moved in four directions.
Thus, you navigate back and forth, up and
down on the Braille display safely and easily
from every place in a document without ever
taking your fingers off the reading position.

Safe and fast Braille reading

Profit from the high quality of the 40
Papenmeier Braille cells during your daily work
and read documents precisely and quickly.

Cell caps

Make your choice whether your Braille display
should come with concave or flat cell caps.
For Braille learners, we recommend the
concave cells formed to follow the curve of
your fingertips.
